FROM: Richard V. Smith, Geologist *RVS*
Everett Hooper, Reclamation Soils Specialist *EH*

RE: Field Inspection September 5, 1985

The site consists of a bulldozed pit approximatey 120 x 20 x 40 ft and several adjacent piles of material. Four photographs of the pit and two of the piles of material were taken. No drainage or sedimentation controls were observed. The disturbed area does not appear to exceed two acres and active mining apparently occurs sporadically. Moderate to slight erosion is occurring in the disturbed area.

A Notification of Performance of Labor indicates drilling, sampling and testing was conducted between August 3-16, 1985 by Don W. Fallone. The operator has posted a bond, however, an Annual Operations and Progress Report (Form MR-3) has not been received since 1982. The file should be updated by forwarding a Form MR-3 to the operator.
